**4. Special Instructions:**

- a) Stock tanks must be surveyed for possible aquatic habitat and archeological concerns before maintenance cleaning is authorized. We should plan ahead for these surveys.
- b) Ongoing grazing consultation for the Chiricahua Leopard Frog is in progress.
- c) Salt or mineral blocks should not be placed within a quarter mile of water and ideally no closer than one-half mile. Salting is not authorized on any watering locations. Place blocks in lightly used areas until allowable forage use is achieved and then move them to the next least utilized area. Blocks should not be placed in meadow bottoms or near roads. Do not place block in the same area used in previous years and finally, put them on hard ground not susceptible to erosion.
- d) Any changes made in this plan because of any of the above will be made in cooperation with the District Range Staff and approved prior to the change by the District Ranger. The permittee will give the District at least Five-day notice of an anticipated change.

**5. Utilization Standards and Monitoring:**

Allowable use is the percentage of use that will be allowed on key grass and browse species. This use will be measured in the key monitoring areas shown below for the Davis Canyon Allotment. Adherence to utilization levels *is mandatory and should be the limiting factor* in adjusting grazing management. Adjustments in numbers, rotation schedule, or season of use will be made if allowable use standards are met. Cattle will be moved to the next scheduled pasture or off the allotment when these forage utilization standards are met. The option to return livestock to a pasture that has received adequate plant re-growth will be considered if all resource objectives can be met.

The maximum allowable use levels set for the Davis Canyon Allotment will be **35%** (2.5 inch average stubble height on Blue grama grass) during the growing season from May 1 through Sept 30. The maximum allowable use levels during the dormant season from October 1 through April 30 will be **40%** (2 inch average stubble height on Blue grama grass). Use of browse is not to exceed the **50%** level. Use levels will be monitored in the following areas:

**6. Range Improvements:**

**a) Fences:** Proper maintenance of fences will help ensure they will hold livestock in a pasture and will extend their useful life. Fences in need of reconstruction will be inventoried and prioritized by the District for reconstruction. Please let us know if any other fences than the above described are beyond reasonable repair and are in need of reconstruction.
